Specifically, regarding claim 1 and similarly claims 8 and 15, Eschbach does not teach the "judging whether correction of image data of a color image is necessary based on a quality of sunset scene, the color image covered with a specific color, contrast and sharpness of the whole area of the image data; and

performing a predetermined correction processing on at least a portion of the color image based on the judgment of the quality of the image data, unless judged that correction processing is not necessary, wherein the

necessity/nonnecessity of correction is judged based on the items pieced together."
